How would I, programmatically, be able to get the length of that array? The string's length? There doesn't seem to be a function for that? I would be able to do myArray.Length but then I can't have the knowledge of what chars I'm dealing with, and I have a method somewhere else that's supposed to use the chars at the right offset to be able to print them. A: You can use: myArray.Length EDIT: And in case

you want to know how many chars in the array with the length: char[] array = new char[5]; Console.WriteLine(array.Length); A: For .NET Core versions >3.0, you can use: int count = myArray.Length; Which gives you the count of chars in array. This works because Array implements ICollection which provides Count property. For the rest of the versions, you can use: int count = (char*)myArray.GetValueOrDefault(0); Simultaneous determination of three components in anti-osteoporosis drugs by liquid chromatography-tandem mass spectrometry method 1cb139a0ed
